

ENDURANCE ROD GUIDE INSTALLATION TOOL

Endurall is constantly striving to make improvements to our products. We know that our Endurance rod guide is the best field installed guide available today. No other field installed guide lasts as long or stays in place on the sucker rod as well as the Endurance rod guide.

"NEW FEATURES"

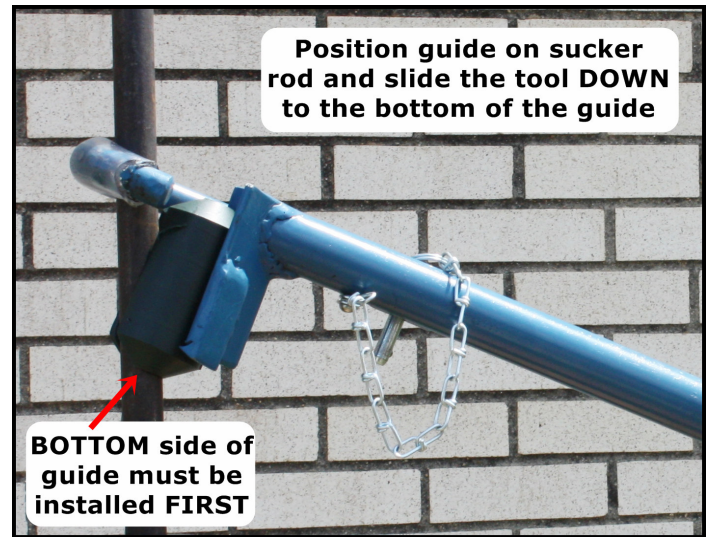

Because this guide has such enormous "grip", it *may* present a slight challenge during the installation. We are proud to offer an installation tool that works on all sizes of Endurance rod guides and now features an **adjustable hook**. This allows the installer to select the best length for the maximum leverage. **Cleats** have been added to the angle to better hold the rod guide in place during installation on the sucker rod.

"INSTALLATION"

The most important step to proper (and easy) installation of the Endurance Rod Guide is to start in the correct position – with the bottom of the rod guide pressed on to the sucker rod first.

Simply hold the guide against the sucker rod and position the hook around the rod and slide the tool down so that the guide rests against the rod **at an angle**.

Once the bottom of the guide is pressed on, slide the tool further up the guide and press the guide into place.

STEP ONE

 When installing larger diameter guides, remove the locking pin and extend the hook to get the best angle and maximum leverage!

STEP TWO

STEP THREE
